Assessment comments

Example 1: SLP1

Subject: Economics

Component: SL paper 1

Question 2 Part	Marks awarded	Marks available	Comments
(a)	9	10	The answer starts with accurate terminology on supply-side policies and gives good context. The diagram used is acceptable but could have been drawn more clearly. The explanation of market-based supply-side policies that are focused on reducing taxation is well made and related to an increase in potential output shown on the diagram. This is related to the way this aspect increases domestic competition. The next part of the argument is a good explanation of how interventionist supply-side policies through education and healthcare improve a country's international competitiveness. This detail is related to the diagram. The final point about supply-side policies improving the quality of a country's products to increase international competitiveness is well made. This is a clear, accurate answer that uses effective theory and terminology. The diagram is correct, but it could be improved. Nine marks are awarded.
(b)	14	15	The context of the answer is clearly set out with good use of terminology. The answer introduces Singapore as its real-world evidence (RWE), and it is effectively used to illustrate the theoretical points made. The point about education reducing structural unemployment is well made and referred to using the diagram. The point about how government intervention might increase aggregate demand is reasonable. The answer has a good evaluative section which covers the impact of interventionist supply-side policies on the government budget. The next section is an effective discussion of how expansionary monetary policy can be used as an alternative policy to reduce unemployment. The answer makes good use of theory and provides a good evaluation, although a diagram is missing. The conclusion offers effective evaluation and use of the RWE. This is a good theoretical answer, with accurate use of terms, a well-applied RWE and effective evaluation. 14 marks are awarded.
